

Lateral Flow Tests

You may be asked to have a **lateral flow test** for Covid. These quick tests help stop the virus spreading.

Check in at the testing area - wear a mask and use hand gel

Say if you are happy to have the test and share your info

They will ask for
- date of birth
- gender
- ethnicity
- contact info

Do the test - swab the very back of your throat, both sides

Stick the same swab into your nostrils and twirl it around

You will get your result quickly - by phone, text or email

If you test positive you will need a PCR test then self-isolate

If you test negative, carry on keeping safe as usual

Don't worry - someone will help you on the day
